Code

Java

```
1 class Solution {
2     public boolean exist(char[][] board, String word) {
3         int rows = board.length;
4         int cols = board[0].length;
5         for (int i = 0; i < rows; i++) {
6
7             for (int j = 0; j < cols; j++) {
```

Code

Auto

```
13     }
14     return false;
15 }
16 private boolean dfs(char[][] board, String word,
17     int row, int col, int index) {
18     if (index == word.length()) {
19         return true;
20     }
21     if (row < 0 || row >= board.length ||
22         col < 0 || col >= board[0].length) {
23         return false;
24     }
25     if (board[row][col] != word.charAt(index)) {
26         return false;
27     }
28     char temp = board[row][col];
29     board[row][col] = '#';
30     boolean found =
31         dfs(board, word, row + 1, col, index + 1) || // Down
32         dfs(board, word, row - 1, col, index + 1) || // Up
33         dfs(board, word, row, col + 1, index + 1) || // Right
34         dfs(board, word, row, col - 1, index + 1); // Left
35
36     board[row][col] = temp;
37     return found;
38 }
39 }
```
